4: Horizon E-6 (no date) 1948
SQ13 Mundurucu SQ13

Within the house each family has its own partitioned quarters and a fireplace or stone manioc oven (Tocantins, 1877). How many families usually occupy a single house has not been reported. 342

CLOTHING AND ADORNMENT

The only item of *Mundurucú* clothing mentioned in the literature is the three-cornered penis cover suspended from a cotton cord, but there are several descriptions of the ceremonial feather garments for which this tribe is famous. Many authors consider the *Mundurucú* to have been the most expert featherworkers in South America within the historic period. 291

Featherwork.—Featherwork includes aprons, capes (attached to headdresses), caps, diadems, belts, girdles, bandoliers, arm bands, and leg bands. The feathers used in this craft were at least in part obtained from birds kept in captivity; red, blue, green, and yellow feathers were carefully sorted by color and size and stored in baskets or in palm-stem cylinders. Martius was told that the *Mundurucú* were able to cause their parrots to grow yellow plumes by plucking their feathers and rubbing frogs' blood into the wounds.[6] The feathers are attached to a net fabric. Tail feathers, arranged in parallel rows, are used in capes and pendants; rosettes of small feathers, bound at the quills, are attached to the base net to cover the attachments of long feathers; imbricated breast feathers may be used to cover the surface of a fabric or to sheathe a cord. Decorative effects are produced by simple alternation of colors. 287 [illegible]

A characteristic feathered staff is described as a stem of cane or wood about 3 feet (1 m.) long and 2 or 3 inches in diameter. The shaft is either covered with long feathers laid flat against it or sheathed with fine breast feathers. At the upper end a dense band of rosettes forms a projecting collar; a free cluster of long plumes may project from the head of the staff. The feathers are attached with wax and cotton thread. These objects are highly valued and when not in use are carefully stored in cylindrical containers. Their significance has not been reported; Martius merely says that when he approached a *Mundurucú* village, staff-bearers came to meet him. 245

Tattooing and painting.—The *Mundurucú* tattooing designs consist of fine, widely-spaced parallel lines applied vertically on limbs and torso; bands of lozenges across the upper part of the chest; occasional parallel horizontal lines, and cross-hatchings. Around each eye is tattooed a single-line ellipse; curved lines are drawn around the mouth. Lines converging toward the ears across the cheeks give the appearance of wings spread across the face. (For illustrations of *Mundurucú* tattooing, see the sketches by Hercules Florence (Steinen, 1899).) 304

[6] Nordenskiöld (1924 b, p. 207) says of this custom, which has been reported from other South American tribes, that the color change actually occurs, but zoologists attribute the change to dietary factors.
